

Cell Phone Technology Schools Indiana Drug Enforcement Association and Instructor Chris Roberts

*If you could see inside a cell
phone...what would you find?*

Mobile devices are no longer just a convenience... they have taken over personal and business communications world-wide. Today, cell phones, smart phones, and PDA's are a part of everyday life. They allow us to communicate and store vast amounts of information and data. This information and data can be retrieved, and is being used more and more in criminal cases nationwide. Investigators are finding that cell phones and cellular service providers are becoming a vast source of evidence upon which we are just grasping.

This full-day class will familiarize investigators with the basics of cell phone technology, what information and data is contained in these phones, forensic methods used in retrieval, cell site analysis, and the information available from cellular service providers. The seminar is designed for investigators to have a better understanding of using mobile devices as evidence in criminal cases.

The course covers the use of SIM cards and expansion cards, prepaid phones, live and historical tracking. You will learn how to obtain criminal evidence from financial crimes, cyber stalking, Cloud storage, and more.

Training Locations and Dates
